

DS 6030 Final Project

Brian Chae

12/2/2021

Brian Chae xsx6eu *Introduction* The project uses images from the Haiti after the 2010 earthquake. Aid efforts were trying to quickly identify blue tarps as locations with a lot of displaced people and the goal was to provide food and water to the people in these concentrated locations who need aid the most. The goal of the project is to find the best performing algorithm for detecting blue tarps in images of Haiti from above.

Setting up

```
library(caret)

## Loading required package: ggplot2

## Loading required package: lattice

library(caTools)
library(dplyr)

##
## Attaching package: 'dplyr'

## The following objects are masked from 'package:stats':
## 
##     filter, lag

## The following objects are masked from 'package:base':
## 
##     intersect, setdiff, setequal, union

library(readxl)
library(doParallel)

## Loading required package: foreach

## Loading required package: iterators

## Loading required package: parallel
```

```

library(ROCR)
registerDoParallel()
getDoParWorkers()

## [1] 4

#First I want to compare the training and the hold out datasets to make sure there is consistency
#We need to combine the hold out dataset
#getwd()

```

```

#Threshold notes:
#True Positive: People who need help get supplies
#True Negative: Supplies are not wasted in a space where nobody is present to use them
#False Positive: Supply is wasted and people don't access it.
#False Negative: People who need help don't get supplies
#I have decided that a false positive is the worst case scenario
